

bwz[®] Schwingungs- Technik

bwz[®] -Corner Shapes

bwz[®] -NBR-moulded plates

Optical professional under your equipment can turn up with round and square moulded plates. For attenuation and isolation we deliver selected elements as see below. Material parameter are described in the bwz - vibration technology pdf-file catalogue. Other areas dimensions we offer as cutted plates from max. 525x525 mm.

Options mean:

NBR9015/XX/YY – material Shore/thickness,
XX = Typ/cut dimension/mm,
with profil in maximum (525²mm)

YY = OO doubleside smooth

PO one side smooth

PP doubleside antiskid profile

Maximal plate dimensions:

bwz[®] - shape corners

simple put under

For fast and problem-free bearing of equipment, not level justable machines bearing.

bwz - shape corners are high elastically and dispose over an high damping properties against horizontal forces and are suitable as for appliances, aggregates, air-conditioner technology, heatings, pumping, compressors, hydraulics tanks and others.

bwz - shape corners are quadratic. The machine move is prevented by on two sides angle stops, at the upside a riffle and at the underside an antiskid profile.

The separation of a side stop provides long bearing distances to shorten.

As material get black nitrile rubber (NBR) with 70° Shore (A) used. NBR is resistant against leayes, acids, soap solutions, salts, benzene and mineral oil.

The dynamical nominal frequency under maximal load is determined by ca. 13 Hz.

TYP	Max. Load / daN	Dimension / mm				weigth / Kg/dm ²
		a	b	c	h	
7E	400	75	63	15	25	0,140
9E	600	90	78	15	25	0,177
12E	1300	125	113	15	25	0,357
